PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building and integrating LLM-powered applications, RAG pipelines, and computer vision systems into production-ready workflows on Microsoft Azure. Proven ability to collaborate across data, engineering, and business teams to translate AI capability into measurable outcomes including a 95%-accuracy FinTech credit-scoring model and reporting automation that cut processing time by over 90%. Currently deepening expertise in enterprise AI infrastructure and cloud deployment, with a delivery-focused approach to solving real business problems.

CORE SKILLS

AI & LLM Engineering: Prompt Engineering, RAG Pipelines, LLM APIs (OpenAI/Anthropic), Vector Search (Pinecone), Agentic Workflows, RAG Evaluation

Cloud & Enterprise Platforms: Microsoft Azure (VMs, Storage, IAM, Networking), Cloud Security, Docker, Kubernetes, CI/CD Fundamentals

Machine Learning & Computer Vision: Scikit-learn, TensorFlow, YOLOv8, OpenCV, NLP, Predictive Modeling, Feature Engineering

Software & Systems Integration: Python, Java, SQL, JavaScript, React.js, Django, FastAPI, REST API Development

Data & Business Intelligence: Power BI, Exploratory Data Analysis, Statistical Analysis, Data Pipeline Automation

PROFESSIONAL EXPERIENCE

AI Intern | Zetheta Algorithms Pvt. Ltd.

Jan 2026 – Mar 2026

- Engineered a credit scoring and financial analytics model for FinTech applications, achieving 95% accuracy through systematic feature scaling and iterative tuning on a mid-sized transactional dataset.
- Delivered an end-to-end pipeline — from raw data preprocessing to a live analytics dashboard — within a 2-month cycle, adopted by Zetheta for internal financial reporting.
- Built and deployed an LLM-powered automation layer that processed users' financial transactions automatically, reducing manual analysis effort.

AI Intern | Unified Mentor Pvt. Ltd.

Mar 2026 – Jun 2026

- Benchmarked Random Forest, XGBoost, and baseline regression models to forecast restaurant sales across a large-scale dataset, selecting the highest-performing approach for deployment.
- Improved model accuracy to approximately 85% through structured data cleaning, feature engineering, and exploratory analysis of business and temporal variables.
- Diagnosed and resolved model underfitting by expanding training data and refining feature selection, strengthening prediction reliability.

Data Analyst Intern | Bluestock FinTech

Jun 2026 – August 2026

- Deliver interactive Power BI and SQL dashboards used regularly by Bluestock FinTech stakeholders to inform data-driven decisions.
- Reduced a 2-hour manual reporting process to roughly 10 minutes (~92% time savings) by automating data cleaning and reporting workflows.
- Process and clean 8–10 large financial datasets weekly, maintaining consistent, decision-ready reporting.

Cloud Computing Intern | Wipro – Inspire Leap

May 2026 – July 2026

- Completed 8 hands-on Azure labs spanning VMs, storage, networking, IAM, and Docker, then applied that foundation to deploy a VM and a containerized web app for a live team project.
- Contribute to production-adjacent deployment tasks beyond training exercises, building applied experience in Azure infrastructure and cloud security.

PROJECTS

Career Twin AI — AI Career Navigator | github.com/FakhruBhoi/career-ai-navigator

- Built an AI career agent that optimizes resumes for ATS compatibility and guides users through job-search and career strategy using LLM-based analysis.
- Designed tailored resume-improvement recommendations aligned to specific target roles and companies.

AquaMapper — Rainwater Harvesting Platform | github.com/FakhruBhoi/AquaMapper-Backend

- Engineered a geospatial ML platform to identify optimal rainwater harvesting locations, achieving ~92% model accuracy with ~2-second response time.
- Resolved model underfitting by expanding the training dataset, improving prediction consistency.
- Developed REST APIs and interactive dashboards to surface location recommendations to end users.

VisionMind — AI Multimodal Assistant | Personal Project

- Built a multimodal AI assistant combining a YOLOv8-based computer vision model with an LLM for contextual, RAG-powered Q&A.
- Designed an interactive 3D visualization interface using Three.js to present assistant outputs.

Epilepsy Management Platform | github.com/whitebeard02/Epilepsy_Management_Platform (team project)

- Integrated backend and frontend systems and developed role-based dashboards for doctors and patients as part of a collaborative healthcare platform.

- Implemented access control ensuring doctors and patients each view only their permitted data, supporting care coordination and privacy.

HerSense AI — Women's Health Management Platform | <https://github.com/FakhruBhoi/hersense-bio-os.git>

- Built a health-tech platform to help women track and manage menstrual cycles, pregnancy, and postpartum health.
- Applied ML-based analysis to menstrual cycle data to support personalized health tracking and management insights.

EDUCATION

Bachelor of Engineering (B.E.), Artificial Intelligence & Data Science

2023 – 2027

MJCET, Hyderabad

CERTIFICATIONS

- Microsoft Azure Cloud Computing
- Data Analytics Using Power BI — Workshop
- Generative AI Masterclass
